

Principles for Responsible Outdoor Lighting

USEFUL – all light should have a clear purpose.

- Determine if light is needed.
- Consider how the light will impact the area, including wildlife and the environment.

TARGETED – only direct light to where needed.

- Use shielding and careful aiming to point light beam downward.
- Limit light spillover beyond where needed.

LOW LIGHT LEVELS – lights no brighter than necessary.

- Use lowest light level required.
- Be mindful of surface conditions: some surfaces may reflect more light into night sky than intended.

CONTROLLED – use light only when useful.

- Use timers, motion detectors, dimmers, or programmable lighting.
- Turn off when not needed.

COLOR – use warmer color lights.

- Limit amount of blue violet light to least amount needed. Select 2700°K or less.

So Many Responsible Outdoor Lighting Choices!
